

I am concerned that BPL will cause harm to the ham radio users by creating an RF field that will not allow our signals to pass thru. If this is the case, it will hurt the hobby of ham radio and in turn cause us to loose our frequency bands. My fear is that when the frequency bands are "lost" and "no longer useful" to the ham radio community, the Govt. will want to sell them to the highest bidder. If this happens, our hobby as we know it today, will be lost.
